Our engineers have just returned from a visit to Dhading where they have shared the progress of the rebuilding work at Gayatri Devi Primary School. As you can see from the photos below, the building is now complete and they are now working on the final fittings inside and the railings and landscaping outside.

We are now looking at extra ways that we can improve the usability of the new classrooms. 2 years ago, TBS students provided a solar panel system to another set of classrooms at Gayatri Devi Primary School. They have asked if it is possible to do the same to this new building. This will reduce their dependence on the electricity supply, with the hope that eventually they will be completely self sufficient.

Below is a collection of photographs taken over the past year at Gayatri Devi Primary School. We have worked in close partnership with all 3 of the school communities in Dhading, with the knowledge that the work we are doing will not only change the lives of today’s students but for many generations to come. (in the photos below you can see the existing building to the left with the solar panel system installed by TBS students).
We will continue to keep our supporters around the world updated on the rebuilding work. Both Shree Khanigau primary school and Shree Rudrakanya primary schools' buildings are also nearing completion. We will soon be travelling up to Dhading to formally hand over all three new school buildings to the Principals of the schools. Again we wish to thank all our supporters around the world. We would not have been able to get to where we are today without your support.

Thank you!
