Our mission is to provide an outstanding education in an inclusive and international school where staff, students and parents work together in a safe, caring and respectful community.

Our vision is to help develop young people who strive for excellence and are kind, through an emphasis on:

Challenge: students are inspired to take risks and push the boundaries of their perceived capabilities to achieve personal excellence;

Creativity: students are encouraged to develop their imagination to allow for inventiveness and innovation;

Confidence: students are assured communicators, able to appropriately express their ideas, opinions and individuality with integrity;

Compassion: students are empathetic, considerate and kind, creating a warm, welcoming and collaborative environment

Community: students have a positive impact on the local and global community as a result of a mature awareness of local and global issues and personal responsibility

2 min task: please create a drawing using your choice from the materials provided and using the descriptions below are guides:

It looks like a board game or a city map with roads and traffic light on red.

It is decorated with bright primary colours and geometric shapes, like lifts/elevators moving up and down a building.

I see squares, rectangles of different size and colour, like a puzzle or the circuit board of a robot.

Vision

The Creative and Performing Arts educate, communicate and empower students to learn more about themselves, Their community and the world around them/or place within the world.

Participation in the Creative and Performing Arts provide a unique and transferable learning experience building resilience, intellectual curiosity, compassion and creativity offering within the education of the whole child.

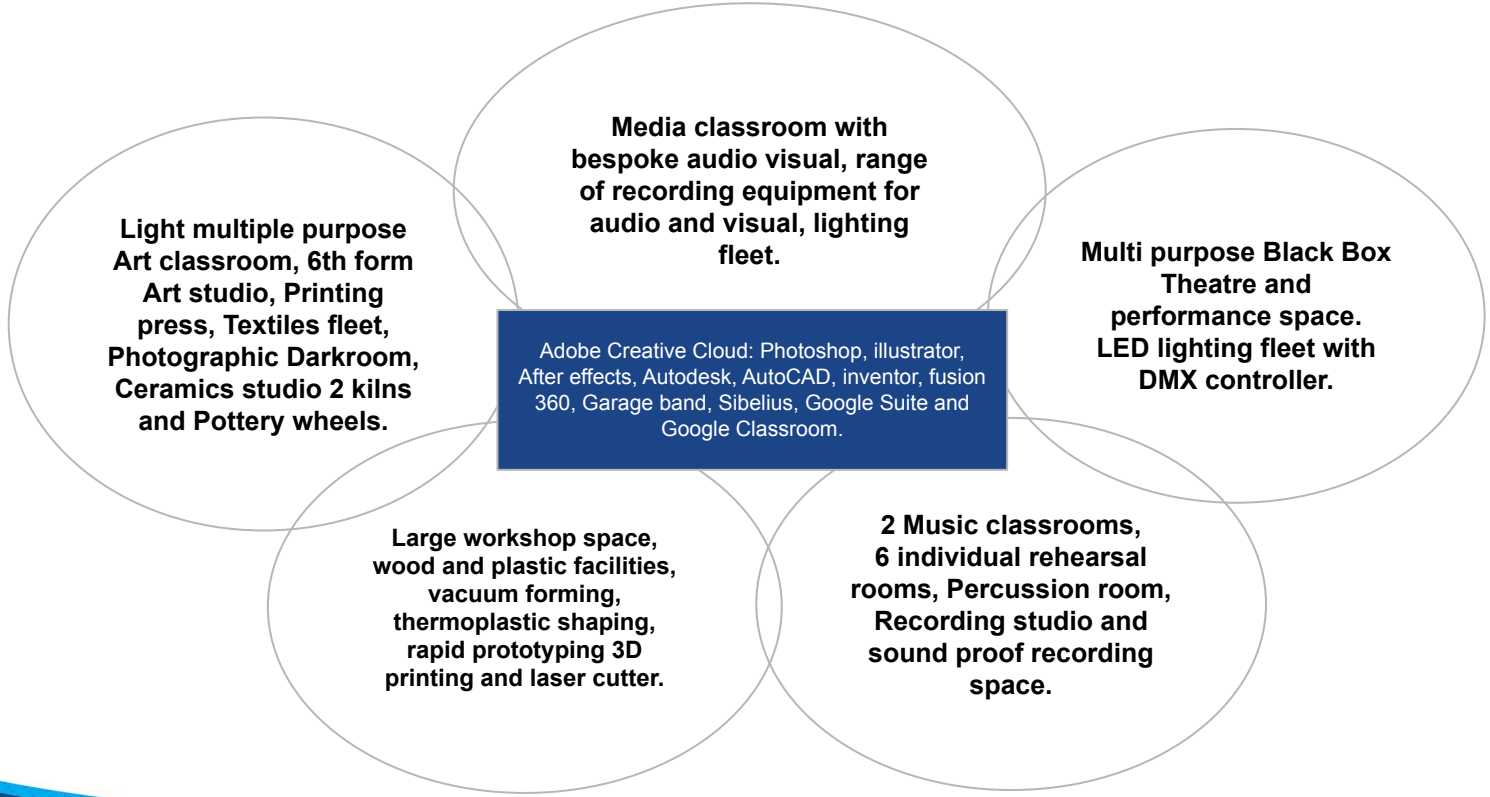
How does TBS learning environment facilitate CPA?



Creativity is a core life skill that children should develop from an early age. It supports academic performance and helps uncover children's various talents.

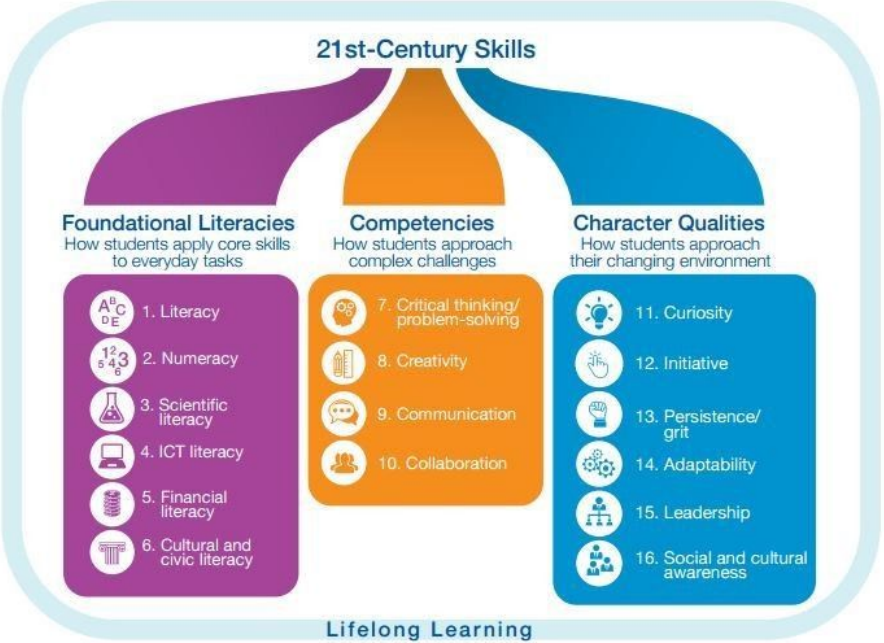
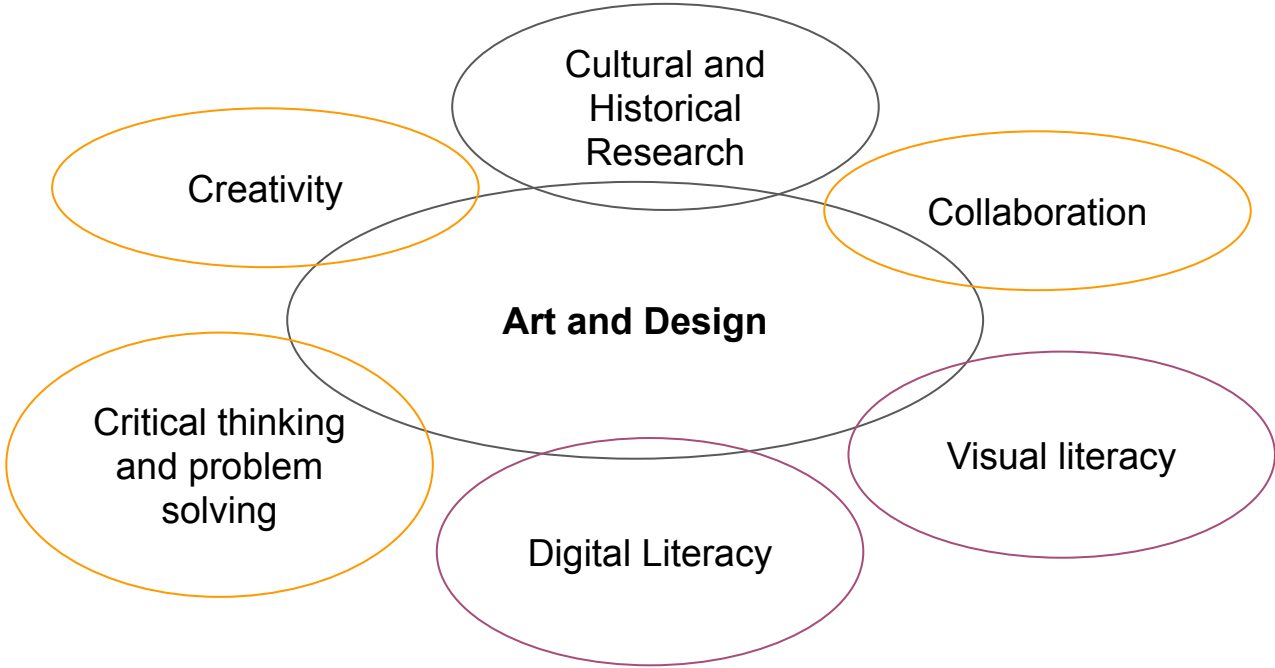
21st Century and Transferable Skills



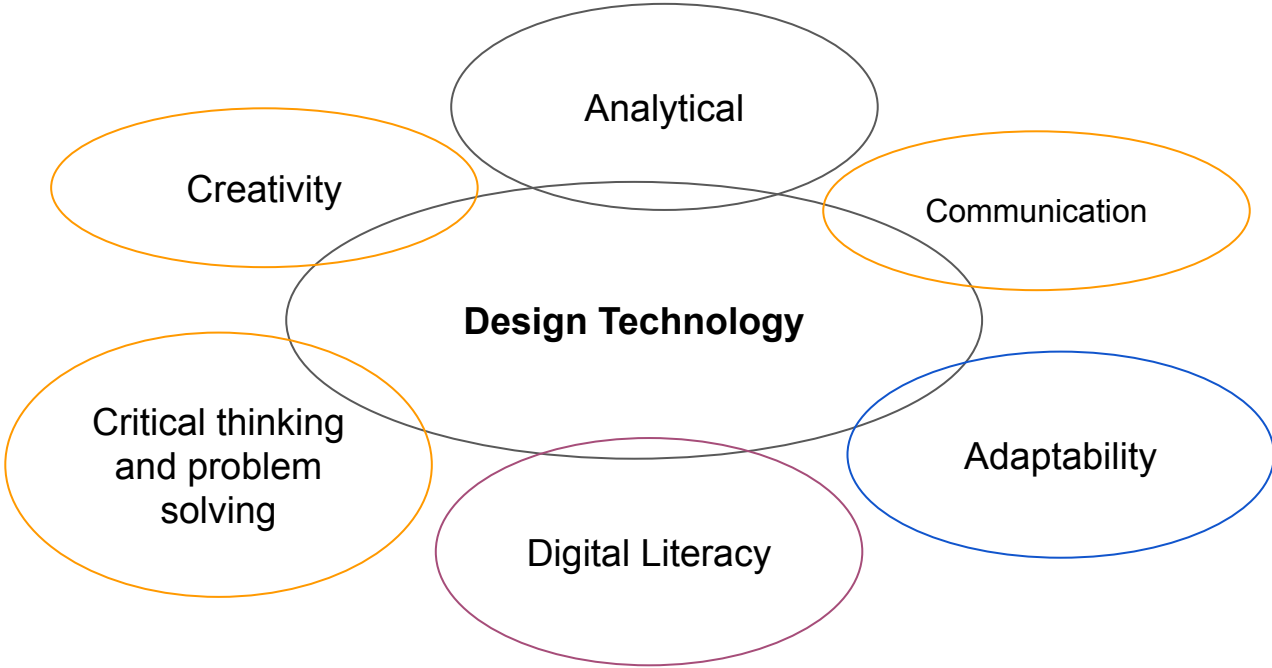
World Economic Forum

"Art teaches critical thinking, problem solving, and collaboration, which enhance students' ability to succeed in other areas of academia."
Charles Ansorge, National Art Education Association

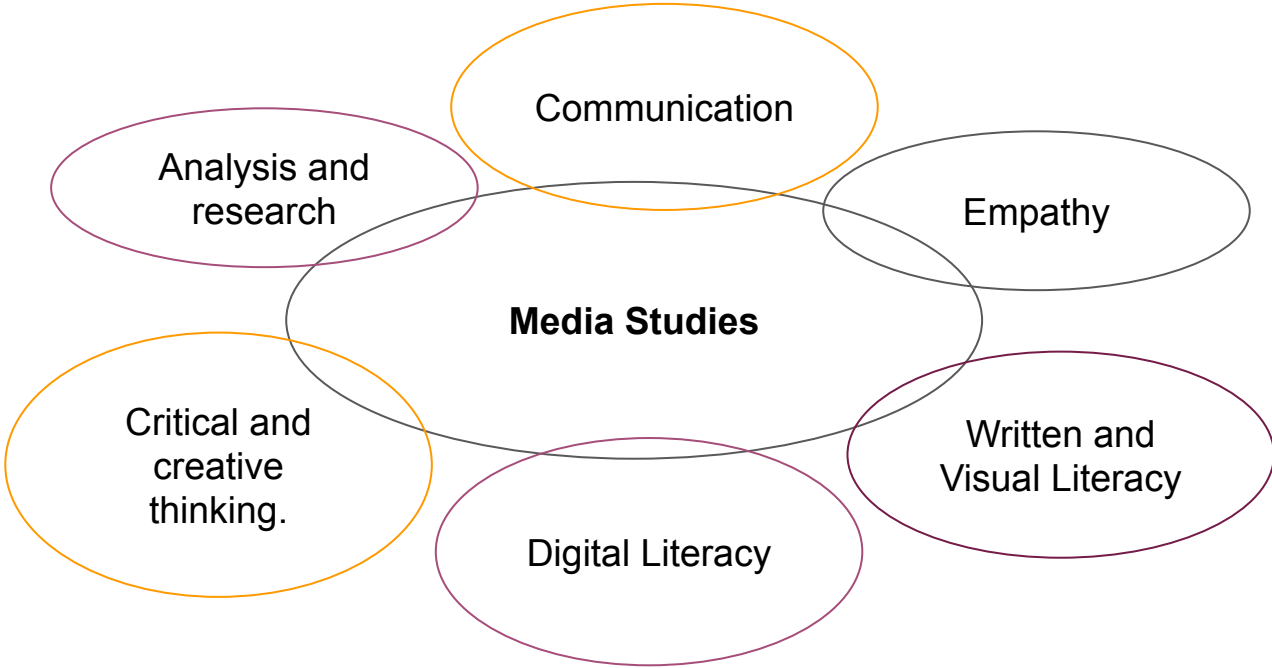


Professor Robert Brink, Head of School of Engineering and Digital Arts at the University of Kent:

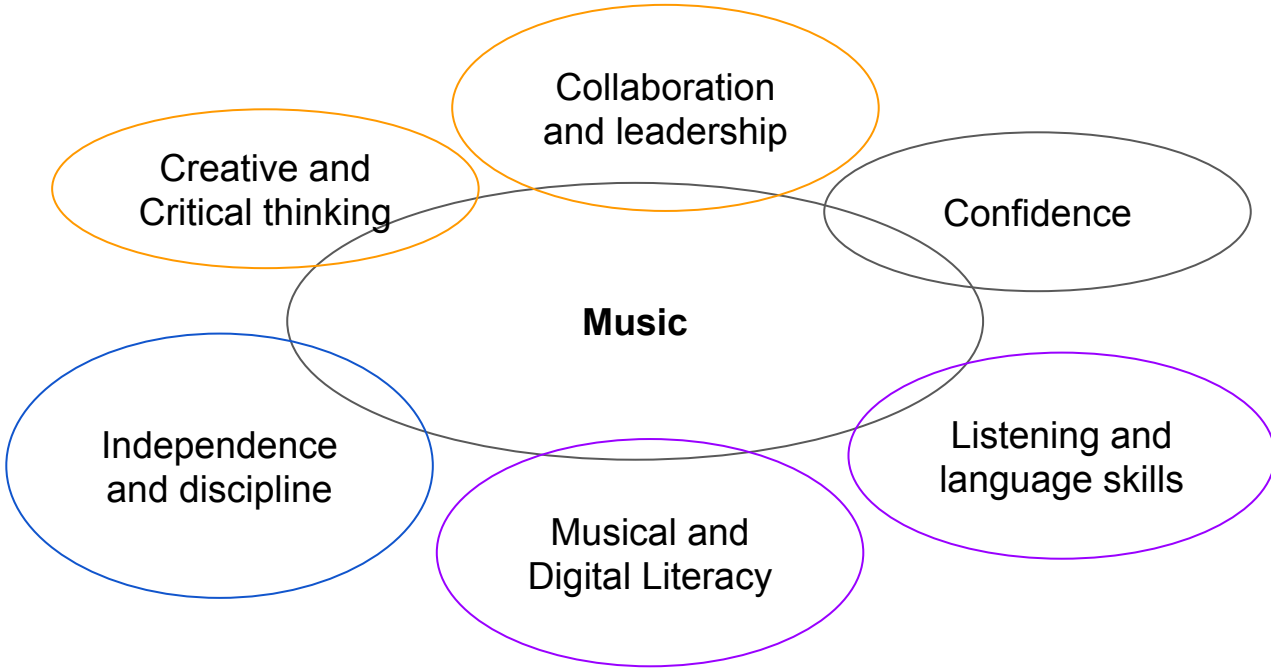
"Design technology gives learners the opportunity to develop a range of interrelated essential skills and behaviours, such as critical and creative thinking, problem solving and collaboration. The vocational nature of design technology also supports the development of well-rounded individuals who have the essential employability skills sought by employers.



Dr. Will Brooker, professor of film and celebrity studies at Kingston University, says “Media studies helps equip students for the modern world, giving them analytical tools to better access and evaluate the mass of information and images that surrounds us: the ability to write for different genres and audiences; multimedia production; critical understanding of power dynamics, technology and representation.”



Graeme D. Catto, President of the GMC, stated “Music is a great way to foster creative and problem-solving skills that can be transferred to all areas of education, from problem solving in maths to reciting in drama and languages”.



"Drama helps to strengthen links between the imagination and the world of knowledge. It encourages the ability to create, imagine and think abstractly; to invent material, to listen, to observe and reflect; to solve problems and work as part of a collective. Its impact goes far beyond the world of theatre: it enables children to enter the world of study and academia more easily," - José Manuel Ramos, founder of DiGRA Spain
